Existing Connection

---

2 Connect your DSL/Cable Modem to the Internet port on the Wireless Router using a standard RJ-45 Ethernet cable.

3 Connect an Ethernet cable to one of the LAN ports on the Wireless Router to the Ethernet port on your PC.

4 Turn on the DSL/Cable modem first.

5 Then turn on your Wireless Router.

6 Check the LEDs:
- The Power, Internet, and WLAN LEDs should be ON.
- For each active LAN (PC) connection, the LAN Activity LEDs (1-4) should be ON.

7 Turn on your PC.

! Notes

☞ Before setting up the Wireless Router, make sure your PCs are configured to "Obtain an IP (or TCP/IP) address automatically."
For Windows 2000 & XP

① Click **Start** → Click **Control Panel** → **Network and Internet Connections** → (Right-click on) **Local Area Connection** → **Properties**.

② Make sure the box next to Internet Protocol (TCP/IP) is checked. Click the **Internet Protocol (TCP/IP)** and click the **Properties** button.

③ Select **"Obtain an IP address automatically."** Select **"Obtain DNS server address automatically."** Then click **OK** to complete the PC configuration.
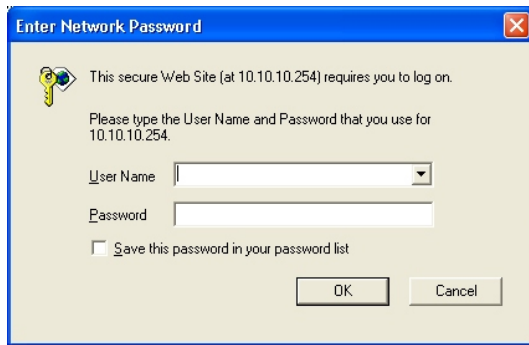

3 Router Configuration

8 For Windows 2000 and XP users, your computer should obtain an IP address automatically from the Wireless Router's DHCP server, after you've done the above steps.

⑨ Start your WEB browser. In the address box, enter the following:
http://10.10.10.254

⑩ Please enter the username " admin" and password
" admin" for login.

⑪ The Setup Wizard provides primary configuration of this device,
you may enter each screen to change the default settings. Simply
click on" Setup Wizard " and follow the on screen instructions
to complete the installation process.
